

DUAL CONTAINMENT TANKS

Pulsafeeder Double Wall Dual Containment Tanks are designed for chemical feed and water treatment applications. All tanks include standard access openings and threaded connections making these tanks ready to place in service as equipped. Tanks quarter turn lid attached to tank with chemical resistant lanyard for visual inspection and no risk of losing lid. The heavy duty tank lid will support metering pump or mixer mounted directly to tank and the quick fill tank fill assembly with cap allows tanks to easily be refilled. The pump pick-up tube port allows installing the pump suction line with check valve quick and easy and once installed it is sealed from outside environment in seconds.

The linear polyethylene construction offers superior chemical resistance for acids, caustics, sodium hypochlorite, biocides, etc and handles aggressive applications that stainless steel and crosslink polyethylene will not. Double Wall Containment Tanks heavy duty dual walled construction is rated for liquids of 1.5 or 2.0 specific gravity and reduces likelihood of spills.

FEATURES

- Tank sizes from 15 to 500 gallon
- Meets or Exceeds EPA's secondary containment standards under 40-CFR 264.175
- NSF/ANSI 61 certified
- Linear polyethylene construction

BENEFITS

- Heavy duty dual walled construction
- Quick fill tank fill assembly with cap
- Standard Openings – 8" (16" on 320 gallon and up) Twist Lid
- 2" & 1" female NPT top connections (plugged)

MODEL SELECTION

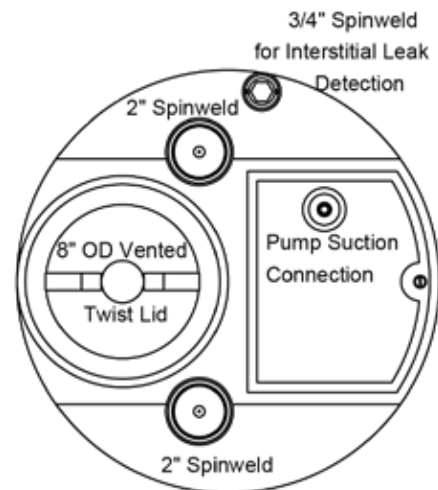

Size Gallons	Material	Cover Type	Mounting Options	Part Number
20	Blue PE	8" Fill Cap	Top Mount	42404
40				42405
62				42406
120				42407
220				42408
320				42409
500		16" Fill Cap		42410
